PHOTOLAB: Results and Future Perspectives of a
collaborative Research Program between FEM and UNIMI

In this seminar we will present the results obtained within the frame of PhotoLab, a three-year research program carried out at FEM in collaboration with the University of Milan. The seminar will be focused on the molecular details responsible of short-term regulation of Photosynthesis and Chloroplast biogenesis elucidated during the last two years. Furthermore, the new collaborative research program, termed GrAptaResistance and supported by Fondazione Cariplo, will be presented.

Room 6302 – Palazzo della ricerca e della conoscenza
18th February, 11 am
